Dome

9-12 Sept. 2022
stand #2.B39d

Journalists are invited to experience a demo of the technology and meet b<>com and its partner, [Aviwest, a Haivision company](#), at the show or arrange an online briefing.

Dome is a technological solution that meets the many challenges of 5G in terms of security, the Internet of things, latency, saturation, and network flexibility.

Dome for broadcasting:

It enables the deployment of 5G ephemeral radio coverage at remote broadcast production sites, and the retransmission of images captured by cameras, microphones, in-ear monitoring systems, lighting etc, to live production studios.

Dome also allows for the manipulation of audio/video streams on site, or from outside broadcast sites. The technology enables the use of wireless cameras and microphones.

b<>com Networks and Security Director Mathieu Lagrange said: "We propose wireless solutions for private networks that are fully software-based, and fit perfectly into our customers' existing IT infrastructures. ***Dome*** allows broadcasters incredible flexibility without any loss of broadcast quality."

[b<>com will also be showcasing *Sublima*](#). This award-winning HDR converter has a new feature, offering unique variable peak luminance profiles to provide

unmatched flexibility to broadcasters and video content creators/producers. The technology provides a single HDR conversion solution for all types of video content.

Book your slot to experience lab-fresh demos and meet the experts behind the latest broadcast technology.

You can meet the b<>com team at IBC in the French Pavilion in hall 2, stand 2.B39
